

# C++ 11 (14.7) Threads

↳ lock / mutex / cond-var

shared variables

```
int x = 0; int *p = null;
```

```
Thread p { main() }
```

```
tid = thread( );  
p = (int) malloc ( sizeof(int) );
```

```
*p  
x = 1;  
x = 0;
```

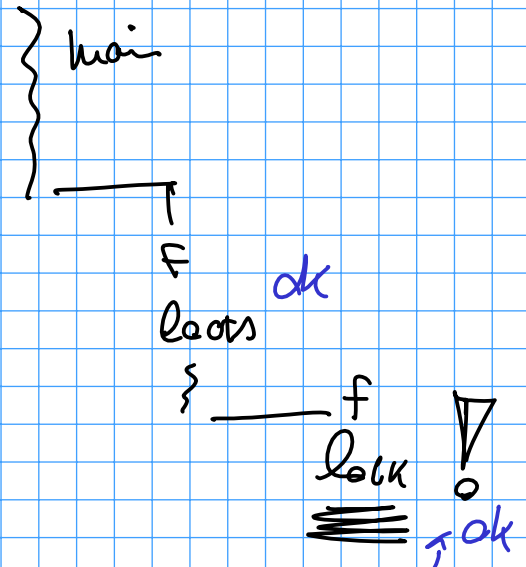

forget unlock

```
[ m.lock();  
  x++;  
  m.unlock(); ] 1k lines of C++ code
```

```
as if lock {  
  lock_guard<mutex> lock(m);  
  if( ) return;  
} as if unlock
```

f( )  
 } lock  
 ∴ f(..)

} unlock  
 return(x)

Recursive-Mutex m

-1 result

std::try\_lock(mx, my)

mx.try\_lock();  
my.try\_lock();  
 if (not passed my)  
 mx.unlock();
